

LABOR RELATIONS

September 5, 2019

Faxed

Mr. Brian J. Wagner  
President  
National Association of Postal Supervisors  
1727 King Street, Suite 400  
Alexandria, VA 22314-2753

Dear Brian

As a matter of general interest, the Postal Service plans to conduct an expanded test of enhancements made to the GEO Alert functionality on the Mobile Delivery Device (MDD).

The GEO Alert feature is used to notify a carrier when they are scanning a parcel outside of the buffer for an address with enhanced coordinates.

This test is scheduled to begin on September 9, and will run through October 25, with a planned national deployment on October 28.

Enclosed is a copy of the draft Service Talk and a list of the location where the test will take place.

Please contact Bruce Nicholson at extension 7773 if you have questions concerning this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "AS Moore".

*AS* Alan S. Moore  
Manager  
Labor Relations Policies and Programs

Enclosures

## MDD GEO Alert Delivery Feature – Expanded Pilot

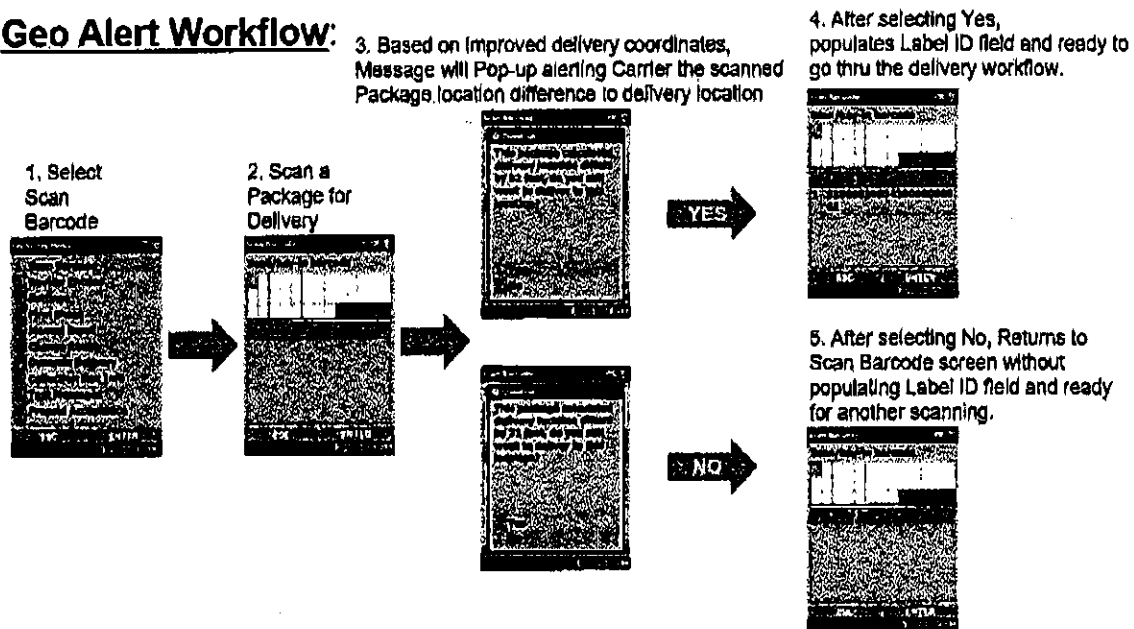

A GEO Alert is an alert that notifies the carrier when a mail piece is potentially being delivered to an incorrect address or geographic location.

Anytime package is scanned for delivery, the GPS position of the device is compared to the GPS position of the destination address. If the scan is outside a predetermined distance then the MDD will provide a GEO Alert to the carrier stating that the delivery location may not be correct. The carrier will have the option to proceed with delivery or to cancel.

The MDD only provides a GEO Alert at locations with enhanced geo coordinates for both the mailbox and front door, known as Enhanced GEO Locations. Enhanced Geo locations are addresses with coordinates and an error buffer between zero and two hundred feet. The MDD will add an additional thirty feet to any address with a buffer of less than fifty feet.

The MDD compares the distance between the package scan point and the coordinates associated with the mailbox and the front door. If either are within the range of the scan, the GEO Alert is suppressed. Otherwise an alert is triggered.

### Geo Alert Workflow:
